

Lab Assignment

Data Science

Install Hive in Hadoop Map Reduce Framework and execute the following operations

There is an employee table (empid, name, designation, year_of_joining, country). Use and execute apache hive queries for following operations.

- i) Create table employee with above attributes
- ii) Consider a file.txt that consist of all data related to attributes and is located in '/home/exam/file.txt'. Insert the data from file.txt into table employee.
- iii) Display all details of Employee table using select query.
- iv) add new columns to an existing employee table using alter query.
- v) Create table emp_partition using partition column year_of_joining.
- vi) Insert data into table emp_partition where year_of_joining is 2015 and country is India.
- vii) Use HDFS command to list out partition created in "/usr/warehouse/emp_partition"
- viii) After installation of Hive, modify the Metadata Configuration for MySQL as the storage for metadata. Therefore, you need to modify the Hive configuration file.
